An Evolution Of The Human
Human evolution, the process by which human beings developed on Earth from now-extinct primates. The only extant members of the human tribe, Hominini, belong to the species Homo sapiens. The exact nature of the evolutionary relationships between modern humans and their ancestors remains the subject of debate.

[human evolution | Stages & Timeline | Britannica](#)

Human evolution is the evolutionary process that led to the emergence of anatomically modern humans, beginning with the evolutionary history of primates—in particular genus Homo—and leading to the emergence of Homo sapiens as a distinct species of the hominid family, which includes the great apes.

How Did Humans Evolve? - HISTORY

Both genetic and fossil evidence show that until relatively recently, human evolution happened in Africa. Whether the genus Homo first emerged in southern or in eastern Africa remains unclear. Knowing where our species evolved matters because the environment to which it adapted helped to shape the genetic make-up we still carry with us today.

Human Evolution – the facts | National Geographic

Human evolution. Wanting to understand who we are, where we come from and how we evolved is part of what makes us human. This an exciting time to be examining human evolution. Intriguing fossil and archaeological discoveries, combined with innovative techniques and DNA research, are transforming scientists' understanding of our ancient past.

Human evolution | Natural History Museum

Human evolution is the lengthy process of change by which people originated from apelike ancestors. Scientific evidence shows that the physical and behavioral traits shared by all people originated from apelike ancestors and evolved over a period of approximately six million years.

Introduction to Human Evolution | The Smithsonian ...

Since about 4 million years, human evolution has been a long, long process. From early hominids to modern humans, we are in the process of evolving at this very moment. Mammals existed during the era of dinosaurs. But they kept a low profile and remained small and furry like a hamster.

Human evolution - Human evolution - Background and beginnings in the Miocene: It is generally agreed that the taproot of the human family shrub is to be found among apelike species of the Middle Miocene Epoch (roughly 16–11.6 mya) or Late Miocene Epoch (11.6–5.3 mya).

Human evolution - Background and beginnings in the Miocene ...

The timeline of human evolution outlines the major events in the evolutionary lineage of the modern human species, *Homo sapiens*, throughout the history of life, beginning some 4.2 billion years ago down to recent evolution within *H. sapiens* during and since the Last Glacial Period.

Timeline of human evolution - Wikipedia

Human organs, much like the human heart, have changed and evolved over the history of time. The human brain is no exception to this natural phenomena. Based on Charles Darwin's idea of Natural Selection, species that had larger brains capable of complex functioning seemed to be a favorable adaptation.

Read PDF An Evolution Of The Human Spirit As Seen Through Mosaic Art

Even two million years after the first Homo ancestors made their mark on the evolutionary chain, the human body is adapting to its environment. Since the 19th century, scientists have been...

Human evolution has NOT stopped as extra arteries are ... One of the prominent ways of tracking the evolution of the human brain is through direct evidence in the form of fossils. The evolutionary history of the human brain shows primarily a gradually bigger brain relative to body size during the evolutionary path from early primates to hominids and finally to Homo sapiens. Because fossilized brain tissue is rare, a more reliable approach is to observe anatomical characteristics of the skull that offer insight into brain characteristics.

Evolution of the brain - Wikipedia

Evolution of the human brain The human brain, in all its staggering complexity, is the product of millions of years of evolution. The brain has undergone some remarkable changes through its evolution. The most primitive brains are little more than clusters of cells bunched together at the front of an organism.

and our common ancestors, on how we became bipedals, following by culture and rise of farming which caused our population to explode which exposed us to all sorts of diseases and then ending book with looking at whats causing certain mismatch diseases such as heart disease, type 2 diabetes and how our body responds to them.

The Story of the Human Body: Evolution, Health and Disease

...

Humans began to evolve about seven million years ago, and progressed through four stages of evolution. Research shows that the first modern humans appeared 200,000 years ago. Neanderthals were a separate species from humans. Although they had larger brain capacity and interbred with humans, they eventually died out.

The Evolution of Humans | World Civilization

The human eye, showing the iris. In 1802, philosopher William Paley called it a miracle of "design". Charles Darwin himself wrote in his Origin of Species, that the evolution of the eye by natural selection seemed at first glance "absurd in the highest possible degree". However, he went on that despite the difficulty in imagining it, its ...
