Rome described Cradle to Cradle: Remaking the Way We Make Things, written by William McDonough and Dr. Michael Braungart, as a much better introduction to sustainable design compared to R. Buckminster Fuller's Operating Manual for Spaceship Earth. Although in 1969, Fuller's Operating Manual was new and inspiring. Inspiring particularly to those individuals who strived to invent eco-efficient ways of providing energy, building things and managing wastes.

Recycling is good, isn't it? In this visionary book, chemist Michael Braungart and architect William McDonough challenge this status quo and put forward a manifesto for an intriguing and radically different philosophy of environmentalism."Reduce, reuse, recycle". This is the standard [cradle to grave] manufacturing model dating back to the Industrial Revolution that we still follow today.

A manifesto for a radically different philosophy and practice of manufacture and environmentalism "Reduce, reuse, recycle" urge environmentalists; in other words, do more with less in order to minimize damage. But as this provocative, visionary book argues, this approach perpetuates a one-way, "cradle to grave" manufacturing model that dates to the Industrial Revolution and casts off as much as 90 percent of the materials it uses as waste, much of it toxic. Why not challenge the notion that human industry must inevitably damage the natural world? In fact, why not take nature itself as our model? A tree produces thousands of blossoms in order to create another tree, yet we do not consider its abundance wasteful but safe, beautiful, and highly effective; hence, "waste equals food" is the first principle the book sets forth. Products might be designed so that, after their useful life, they provide nourishment for something new-either as "biological nutrients" that safely re-enter the environment or as "technical nutrients" that circulate within closed-loop industrial cycles, without being "downcycled" into low-grade uses (as most "recyclables" now are). Elaborating their principles from experience (re)designing everything from carpeting to corporate campuses, William McDonough and Michael Braungart make an exciting and viable case for change.

'Reduce, reuse, recycle' urge environmentalists; in other words, do more with less in order to minimize damage. But as architect William McDonough and chemist Michael Braungart point out in this provocative, visionary book, this approach only perpetuates the one-way, 'cradle to grave' manufacturing model, dating to the Industrial Revolution, that creates such fantastic amounts of waste and pollution in the first place. Why not challenge the belief that human industry must damage the natural world? In fact, why not take nature itself as our model for making things? A tree produces thousands of blossoms in order to create another tree, yet we consider its abundance not wasteful but safe, beautiful and highly effective. Waste equals food. Guided by this principle, McDonough and Braungart explain how products can be designed from the outset so that, after their useful lives, they will provide nourishment for something new - continually circulating as pure and viable materials within a 'cradle to cradle' model. Drawing on their experience in redesigning everything from carpeting to corporate campuses, McDonough and Braungart make an exciting and viable case for putting eco-effectiveness into practice, and show how anyone involved in making anything can begin to do so as well.

Tackles resource scarcity and sustainability and describes how everyday objects from chairs to cars and factories are being redesigned to sustain and promote life.

Early care and education for many children in the United States is in crisis. The period between birth and kindergarten is a critical time for child development, and socioeconomic disparities that begin early in children's lives contribute to starkly different long-term outcomes for adults. Yet, compared to other advanced economies, high-quality child care and preschool in the United States are scarce and prohibitively expensive for many middle-class and most disadvantaged families. To what extent can early-life interventions provide these children with the opportunities that their affluent peers enjoy and contribute to reduced social inequality in the long term? Cradle to Kindergarten offers a comprehensive, evidence-based strategy that diagnoses the obstacles to accessible early education and charts a path to opportunity for all children. The U.S. government invests less in children under the age of five than do most other developed nations. Most working families must seek private childcare, which means that children from low-income households, who would benefit most from high-quality early education, are the least likely to attend them. Existing policies, such as pre-kindergarten in some states are only partial solutions. To address these deficiencies, the authors propose to overhaul the early care system, beginning with a federal paid parental leave policy that provides both mothers and fathers with time and financial support after the birth of a child. They also advocate increased public benefits, including an expansion of the child care tax credit, and a new child care assurance program that subsidizes the cost of early care for low- and moderate-income families. They also propose that universal, high-quality early education in the states should start by age three, and a reform of the Head Start program that would include more intensive services for families living in areas of concentrated poverty and experiencing multiple adversities from the earliest point in these most disadvantaged children's lives. They conclude with an implementation plan and contend that these reforms are attainable within a ten-year timeline. Reducing educational and economic inequalities requires that all children have robust opportunities to learn, fully develop their capacities, and have a fair shot at success. Cradle to Kindergarten presents a blueprint for fulfilling this promise by expanding access to educational and financial resources at a critical stage of child development.

Written by Virginia Grohl, the mother of Dave Grohl!former Nirvana drummer and current frontman for the Foo Fighters!From Cradle to Stage shares stories and exclusive photos featuring mothers of rock icons, the icons themselves, and their Behind the Music-style relationships While the Grohl family had always been musical-the family sang together on long car trips, harmonizing to Motown and David Bowie-Virginia never expected her son to become a musician, let alone a rock star. But when she saw him perform in front of thousands of screaming fans for the first time, she knew that rock stardom was meant to be for her son. And as Virginia watched her son's star rise, she often wondered about the other mothers who raised sons and daughters who became rock stars. Were they as surprised as she was about their children's fame? Did they worry about their children's livelihood and wellbeing in an industry fraught with drugs and other dangers? Did they encourage their children's passions despite the odds against success, or attempt to dissuade them from their grandiose dreams? Do they remind their kids to pack a warm coat when they go on tour? Virginia decided to seek out other rock star mothers to ask these questions, and so began a two-year odyssey in which she interviewed such women as Verna Griffin, Dr. Dre's mother; Marianne Stipe, Michael Stipe of REM's mother; Janis Winehouse, Amy Winehouse's mother; Patsy Noah, Adam Levine's mother; Donna Haim, mother of the Haim sisters; Hester Diamond, Mike D of The Beastie Boys' mother. With exclusive family photographs and a foreword by Dave Grohl, From Cradle to Stage will appeal to mothers and rock fans everywhere.
