This is the first full-length monograph devoted to the study of the talk between physicians and patients in a medical interview. Methods are developed to describe, analyze and interpret the discourse. Additionally, a critique and review of previous research in this area is included. In the course of the work, a critique of more traditional methods, studies, and interpretations of medical interviews is presented.

The focus of this volume is on medical discourse, a domain of language which deserves closer scrutiny by academics as well as practitioners, due to its increasing relevance and pervasiveness in modern society. Despite the wealth of publications dealing with specialized or academic discourse and its rhetoric, few of these are devoted specifically to medical discourse. This book seeks to redress the balance by bringing together a number of studies that bear witness to the widespread interest in medical texts shown by linguists and professional communities around the world. The volume is divided into two main parts: the first targets medical discourse in its spoken dimension, while the second contains various analyses of written texts. The theoretical perspectives and individual case studies presented here reflect the wide range of methodological approaches and theoretical issues that characterise current research in the field.

This book features contributions addressing the area of specialised and professional discourse analysis at both the micro- and macro-levels. It offers analyses of the language of medicine, sports, bureaucratic forms, and advertisements, and academic language. Throughout the volume, specialised discourse is approached from a variety of linguistic, literary and cultural perspectives, as well as from those of content analysis, discourse analysis, membership categorisation devices, and semantic/p ...

The second edition of the highly successful *Handbook of Discourse Analysis* has been expanded and thoroughly updated to reflect the very latest research to have developed since the original publication, including new theoretical paradigms and discourse-analytic models, in an authoritative two-volume set. Twenty new chapters highlight emerging trends and the latest areas of research. Contributions reflect the range, depth, and richness of current research in the field. Chapters are written by internationally-recognized leaders in their respective fields, constituting a Who's Who of Discourse Analysis. A vital resource for scholars and students in discourse studies as well as for researchers in related fields who seek authoritative overviews of discourse analytic issues, theories, and methods.

This book combines an authoritative examination of the field of discourse-based research with practical guidance on research design and development. The book is not prescriptive but instead invites expansive, innovative thinking about what discourse is, why it matters to people at particular sites and how it can be investigated. The authors identify a set of questions that, they argue, are crucial for understanding discourse. Part I of the book explores the implications of these questions, providing a comprehensive survey of relevant scholars, theories, concepts and methodologies. Part II addresses these implications, setting out a multi-perspectival approach to resourcing and integrating micro and macro perspectives in the description, interpretation and explanation of data. Part III offers wide-ranging resources to support further reflection and future research. Ultimately, this book offers a new research approach for students, researchers and practitioners in Applied Linguistics to encourage and support research that can be truly impactful through its relevance to social and professional practice.

CDS is a multifarious field constantly developing different methodological frameworks for analysing dynamically evolving aspects of language in a broad range of socio-political and institutional contexts. This volume is a cutting-edge, interdisciplinary account of these theoretical and empirical developments. It presents an up-to-date survey of Critical Discourse Studies (CDS), covering both the theoretical landscape and the analytical territories that it extends over. It is intended for critical scholars and students who wish to keep abreast of the current state of the art. The book is divided into two parts. In the first part, the chapters are organised around different methodological perspectives for CDS (history, cognition, multimodality and corpora, among others). In the second part, the chapters are organised around particular discourse types and topics investigated in CDS, both traditionally (e.g. issues of racism and gender inequality) and only more recently (e.g. issues of health, public policy, and the environment). This is, altogether, an essential new reference work for all CDS practitioners.

The complaints that patients bring to their doctors often have roots in social issues that involve work, family life, gender roles and sexuality, aging, substance use; or other problems of nonmedical origin. In this book, physician/sociologist Howard Waitzkin examines interactions between patients and doctors to show how physicians' focus on physical complaints often fails to address patients' underlying concerns and also reinforces the societal problems that cause or aggravate these maladies. A progressive doctor-patient relationship, Waitzkin argues, fosters social change. Waitzkin provides a pathbreaking analysis of medical encounters, applying perspectives from structuralism, post-structuralism, and critical literary theory to transcripts of recorded conversations between doctors and patients. He demonstrates how doctors unintentionally maintain dominance in their dealings with patients, encourage conforming social behavior and attitudes, and marginalize patients' concerns with social problems. Waitzkin urges physicians to attend to the social as well as the medical problems that emerge from patients' narratives and suggests ways to restructure the manner in which patients and doctors communicate with each other. Physicians and patients, for example, should work together to demystify medical discourse, should refrain from medicalizing social problems through medications or reassurances that dull socially caused pain, and should be prepared to call on advocacy organizations seeking to change the social conditions that create personal distress. This book will influence and challenge physicians, scholars, and students in the social sciences and humanities, as well as anyone concerned about the present problems and future direction of medicine.

This wide-reaching handbook offers a new perspective on the sociology of health, illness and medicine by stressing the importance of social theory. Examining a range of classic and contemporary female and male theorists from across the globe, it explores various issues including chronic illness, counselling and the rising problems of obesity.

Contemporary Theorists for Medical Sociology explores the work of key social theorists and the application of their ideas to issues around health and illness. Encouraging students and researchers to use mainstream sociological thought to inform and deepen their knowledge and understanding of the many arenas of health and healthcare, this text discusses and critically reviews the work of several influential contemporary thinkers, including - Foucault, Bauman, Habermas, Luhmann, Bourdieu, Merleau-Ponty, Wallerstein, Archer, Deleuze, Guattari, and Castells. Each chapter includes a critical introduction to the central theses of a major social theorist, ways in which their ideas might inform medical sociology and some worked examples of how their ideas can be applied. Containing contributions from established scholars, rising stars and innovative practitioners, this book is a valuable read for those studying and researching the sociology of health and illness.

A comprehensive collection of classic and contemporary readings in the sociology of health. The *Sociology of Healthcare* will stimulate debate, reflexive practice and critical thinking in applied sociology and is aimed at the teaching and learning needs of both lecturers and students.
