The first volume of the POSA pattern series introduced a broad-spectrum of general-

purpose patterns in software design and architecture. The second narrowed the focus to fundamental patterns for building sophisticated concurrent and networked software systems

and applications.
This volume uses
design patterns
to present
techniques for
implementing
effective
resource
management in a
system. The
patterns are
covered in
detail making

use of several examples providing directions to the readers on how to implement the presented patterns. Additionally, the volume presents a thorough introduction into resource

management and a case study where the patterns are applied to the domain of mobile radio networks. The patterns are grouped by different areas of resource management and hence address the complete lifecycle of

BANTAM is the first modeling language specifically designed for applications in Biometrics and Token Technology. It represents a

significant step forward for the design and implementation of biometric and related technology applications in that: - it is very simple to learn and use; - it offers a consistent system of

documentation and a clarity of presentation which make the accurate description of user requirements much easier; - it provides a complete methodology for managing the project from

original business case, through procurement and implementation, to subsequent training and support. "The User Guide" provides much more than just a guide to the Bantam methodology:

readers will also find lots of good advice on program management in general and will gain an insight into designing biometric and related applications. It will be essential reading for

anyone who is serious about biometrics and related technologies, including govern mental/corporate end-users, systems integrators, biometric vendors, application developers and
