One of the most conspicuous, and best documented, consequences of modern agriculture has been a massive loss of wildlife, including birds. In this timely addition to the New Naturalist Series, Ian Newton discusses the changes that have occurred in British agriculture over the past seventy years, and the effects they have had on bird populations. He explains how different farming procedures have affected birds and other wildlife, and how an understanding of the processes involved could help ...

The situation differs in the uplands where hill farming does not rely on agrochemicals but grazing pressure, mainly by sheep, has large impacts on vegetation and habitat quality for birds. Although farming practices have fundamentally driven most of the observed declines in farmland wildlife, predation by increasing numbers of corvids and mammalian predators, has probably increased in importance, especially for ground-nesting birds, and may now inhibit recovery of some species.

Apart from eggs and meat, many farmers keep guineas to protect flocks of smaller birds, such as chickens, and to reduce pests such as ticks and snakes on the farm. Guineas are active foragers and love little insects like ticks, and they are fearless hunters when confronted with snakes. They won't shrink from mice or rats, either.

[How Birds Help Farms, Who Help Birds - Wild Farm Alliance](#)

Like the proverbial canary in a coal mine, birds can be a sign of a healthy farm. I've come to realize, too, that our farm is home to so many birds and other wildlife, because for several generations my family installed conservation features on the land: trees and native prairie grass on CRP, but also several shelterbelts, farmstead trees, pollinator habitat, and a prairie grass strip on cropland.

[100 bird species on our farm and counting | Successful Farming](#)

Poultry farming is the form of animal husbandry which raises domesticated birds such as chickens, ducks, turkeys and geese to produce meat or eggs for food. It has originated from the agricultural era. Poultry - mostly chickens - are farmed in great numbers. More than 60 billion chickens are killed for consumption annually.

Around 500 birds also had to be culled on a Kent farm in early November and over 13,000 in Cheshire after H5N8 outbreaks just days apart. Watch: Bird flu outbreak sweeps across Belgium A recent spate of swan deaths across the UK are also reportedly being investigated amid concerns they could be connected to a wave of avian flu from Europe.

[Farm forced to cull 30,000 turkeys after bird flu outbreak ...](#)

Farming is the single largest land-use in Europe. It accounted for nearly one-half of the total land area of the European Union and is consequently home to many common and widespread birds, as well as those adapted to particular agricultural landscapes. However, until relatively recently, the conservation importance of farmlands went unrecognized.
