This book analyses the interface between medicine and colonial society through the lens of gender. Based on hitherto unused primary sources the work traces how since almost the beginning of the nineteenth century the growth of hospital medicine in Bengal created a space—albeit small—for providing Western health care to female patients. It observes that, unlike in the colonial setup, before ...

prove its superiority in domains such as medicine, education, and law. Through the lens of gender politics, Sujata Mukherjee confronts these conflicts to reveal the contested 'body' of the Indian woman. Focusing on hospital medicine and preventive medical care, Mukherjee traces the popularization of Western forms of medical care in nineteenth- and early twentieth-century Bengal. She shows how it created a space-albeit small-for providing Western health care to female patients; for the first time, women could receive medical attention outside the purdah and zenana. However, there was a simultaneous discrediting of indigenous forms of medicine-such as Ayurveda and Unani-and their practitioners, who had once exercised significant influence. The book also explores the growth of Western medical education among women in Bengal. Overcoming racial and gender

The history of medicine and disease in colonial India remains a dynamic and innovative field of research, covering many facets of health, from government policy to local therapeutics. This volume presents a selection of essays examining varied aspects of health and medicine as they relate to the political upheavals of the colonial era. rule. The volume reflects the diversity of the field and showcases exciting new scholarship from early-career researchers as well as more established scholars by bringing to light many locations and dimensions of medicine and modernity. The essays have several common themes and together offer important insights into South Asia's experience of modernity in the years before independence. Cutting across modernity and colonialism, some of the key themes explored here include issues of race, gender, sexuality, law, mental health, famine, disease, religion, missionary medicine, medical research, tensions between and within different medical traditions and practices and India's place in an international context. This book will be of great interest to scholars and researchers of modern South Asian history, sociology, politics and anthropology as well as specialists in the
