in both the central nervous system (CNS) and the peripheral nervous system (PNS).

It controls the glands and smooth muscle of all the internal organs (viscera) unconsciously. This is why it's also called the visceral nervous system.

An autonomic nerve pathway involves two nerve cells. One cell is located in the brain stem or spinal cord. It is connected by nerve fibers to the other cell,

which is located in a cluster of nerve cells (called an autonomic ganglion). Nerve fibers from these ganglia connect with internal organs. Most of the ganglia for the sympathetic division are located just outside the spinal cord on both sides of it.

The autonomic nervous system (ANS) plays an important role in

asthma, primarily through the

parasympathetic (by the cholinergic pathway) promoting bronchoconstriction.

Asthma is a chronic inflammatory disease, however,

bronchoconstriction is
