Local anesthesia is a numbing medication that makes a small area of your body insensitive to pain. It comes in handy for minor surgeries and while stitching up wounds. Local Anesthesia in dentistry is common and various dentists use it for many procedures on a daily basis. Lignocaine or Lidocaine is the most commonly used Local anesthetic agent.

Local Anesthesia in Dentistry – Purpose, Usage & Risks ...

There are two local anesthetic agents used in dentistry that reportedly induce methemoglobinemia. The first agent is the topical local anesthetic benzocaine and the second agent is the injectable (and topical) local anesthetic prilocaine. The mechanism of action is that both of these anesthetics oxidize hemoglobin to methemoglobin.

Local Anesthetics for Dentistry | Pocket Dentistry

Local anesthesia is used for simpler procedures like a cavity filling, which requires a shorter time to complete and is generally less complicated. You will be conscious and able to communicate...
