Winner of the 2004 Gradiva Award from the National Association for the Advancement of Psychoanalysis. The issue of shame has become a central topic for many writers and therapists in recent years, but it is debatable how much real understanding of this powerful and pervasive emotion we have achieved. *Mother-Infant Attachment and Psychoanalysis* argues that shame can develop during the first six months of life through an unreflected look in the mother's eyes, and that this shame is then internalised by the infant and reverberates through its later life. The author further expands on this concept of the look through a powerful and extensive study of the concept of the Evil Eye, an enduring universal belief that eyes have the power to inflict injury. Finally, she presents ways of healing shame within a clinical setting, and provides a fascinating analysis of the role of eye-contact in the therapeutic encounter. This book brings together a unique blend of theoretical interpretations of shame with clinical studies, and integrates major concepts from psychoanalysis, Jungian analysis, developmental psychology and anthropology. The result is a broad understanding of shame and a real understanding of why it may underlie a wide range of clinical disorders.

“ Comprehensive, encyclopedic, and lucid, this book is a must for all practitioners of the healing arts who want to broaden their understanding. Readers interested in the role of herbs and foods in healing will also find much to learn here, as I have. . . . A fine work. ” —Annemarie Colbin, author of *Food and Healing* The promise and mystery of Chinese medicine has intrigued and fascinated Westerners ever since the “ Bamboo Curtain ” was lifted in the early 1970s. Now, in *Between Heaven and Earth*, two of the foremost American educators and healers in the Chinese medical profession demystify this centuries-old approach to health. Harriet Beinfeld and Efrem Korngold, pioneers in the practice of acupuncture and herbal medicine in the United States for over eighteen years, explain the philosophy behind Chinese medicine, how it works and what it can do. Combining Eastern traditions with Western sensibilities in a unique blend that is relevant today, *Between Heaven and Earth* addresses three vital areas of Chinese medicine—theory, therapy, and types—to present a comprehensive, yet understandable guide to this ancient system. Whether you are a patient with an aggravating complaint or a curious intellectual seeker, *Between Heaven and Earth* opens the door to a vast storehouse of knowledge that bridges the gap between mind and body, theory and practice, professional and self-care, East and West. “ Groundbreaking . . . Here at last is a complete and readable guide to Chinese medicine. ” —San Francisco Chronicle

This text integrates sociology and psychology, concentrating on the areas applicable to medicine. It covers such topics as: the life cycle; development of the person; society and health; illness behaviour and the doctor-patient encounter.

Psychology and Geriatrics demonstrates the value of integrating psychological knowledge and insight with medical training and geriatric care. Leading physician and geropsychologist contributors come together to share their collective wisdom about topics that are as emotionally uncomfortable as they are universally relevant. As the world struggles to respond to unprecedented gains in life expectancy and an explosion of new retirees living with chronic health conditions, this collaboration could not be more timely. This exceptional resource is, itself, evidence that physicians and psychologists can work together to optimize truly patient-centered geriatric care. Here at last is a scientifically rigorous, evidence-based response to the aging mind and body from those most expertly trained. Illustrates why and how psychologists must assume a more integrated role in meeting the health care needs of older patients Confronts emotionally laden topics such as cognitively impaired driving, caregiver burden, end-of-life communication, suicide, and systemic issues such as bias, payment, and the culture of medicine Challenges decades-long barriers to integration, from both physician and psychologist perspectives, suggesting how they can finally be overcome Provides an innovative, practical response to academic medicine's growing emphasis on psychological and behavioral science Demonstrates how health care reform creates a behavioral health niche that clinical
