To fulfill a need that has become apparent, this book presents some practical water pollution biological field investigative techniques and practices, procedures to solve problems, data analyses, interpretation and display, and the development and writing of the investigative report. It is written principally for the biologist inexperienced in these activities, and for sanitary engineers, chemists, attorneys, water pollution control administrators, and others who are interested in broadening their understanding of this discipline. The book considers the many aquatic environments, their biotic constituents, and the effects of various pollutants upon them. Field investigations that include forming the study objectives, planning the field study, station selection, sample collection and examination, data analyses and interpretation, and reporting the results are described. Individual water quality constituents that affect the aquatic environment are discussed. Examples of field studies on specific water pollution problems are given with the collected data presented in many graphic variations. The ability to present a clear, understandable concept to the viewer by different methods of displaying data is evaluated. Examples of field investigations, with which the author has been involved, including data collection, analyses, interpretation and display are given for organic wastes, silts, toxic wastes, acid mine drainages, eutrophication, and radioactive wastes. Investigations in marine waters are discussed. Separate chapters detail the biology of municipal water supplies and sewage treatment. Biological nuisances and slimes are discussed, as well as their control. In presenting the book's contents, over 20 years of biological field investigative experience are represented in the described field and laboratory methods, report writing, and data display. Methodology modifications presented may be of value to other professional biologists. Because the results from most problem solving investigations must be presented to the lay public to engage their support for remedial actions, reporting and data display must be clear and readily understandable. Clearness and understandability have been goals of this book.

This book, which brings together scholars from the developed and developing world, explores one of the most salient features of contemporary international relations: South-South cooperation. It builds on existing empirical evidence and offers a comparative analytical framework to critically analyse the aid policies and programmes of ten rising donors from the global South. Amongst these are several BRICS (Brazil, India, China and South Africa) but also a number of less studied countries, including Cuba, Venezuela, the United Arab Emirates, Colombia, Turkey, and Korea. The chapters trace the ideas, identities and actors that shape contemporary South-South cooperation, and also explore potential differences and points of convergence with traditional North-South aid. This thought-provoking edited collection will appeal to students and scholars of international relations, international political economy, development, economics, area studies and business. /div

Presents the OECD Guidelines on Corporate Governance of State-Owned Enterprises as well as a comparative overview of main practices and issues related to corporate governance of state-owned enterprises in the OECD area.

This overview compiles the on-going research in Europe to enlarge and deepen the understanding of the reaction mechanisms and pathways associated with the combustion of an increased range of fuels. Focus is given to the formation of a large number of hazardous minor pollutants and the inability of current combustion models to predict the formation of minor products such as alkenes, dienes, aromatics, aldehydes and soot nano-particles which have a deleterious impact on both the environment and on human health. Cleaner Combustion describes, at a fundamental level, the reactive chemistry of minor pollutants within extensively validated detailed mechanisms for traditional fuels, but also innovative surrogates, describing the complex chemistry of new environmentally important bio-fuels. Divided into five sections, a broad yet detailed coverage of related research is provided. Beginning with the development of detailed kinetic mechanisms, chapters go on to explore techniques to obtain reliable experimental data, soot and polycyclic aromatic hydrocarbons, mechanism reduction and uncertainty analysis, and elementary reactions. This comprehensive coverage of current research provides a solid foundation for researchers, managers, policy makers and industry operators working in or developing this innovative and globally relevant field.

Law and justice are studied in this book from the perspective of social and global history. The main focus of *Workers Before the Tribunal* is to overcome traditional binary oppositions between corporatist and contractualist models of labor relations, the former representing a view in which the working class would have more autonomy in struggling for better labor conditions, the latter meaning the protagonism of the State in promoting labor rights. Teixeira da Silva presents three main arguments. First, he shows that the Brazilian labor justice system created during the Get ú lio Vargas dictatorship (1930-1945), although inspired by Mussolini's legal order in Italy, is very different from the Fascist Magistratura del Lavoro. Second, in his comparative analysis with other national cases, such as the United States, France, Germany and Australia, the author argues that there was a large circulation of ideas and practices, resulting in a more complex dynamic of appropriation of international ideas on labor rights and institutions in Brazil. Third, Teixeira da Silva demonstrates that litigation in labor courts was one strategy of the working-class movement in Brazil, together with strikes and other means of confrontation. Therefore, he questions historiographical and political approaches that see labor justice as a weak substitute for class action. The "jurisdictionalization" of labor relations became a constitutive element in the making of the Brazilian working class. The book is anchored in the research of hundreds of labor litigation cases during the dramatic months preceding the 1964 civil-military coup d ' é tat that inaugurated a quarter century of dictatorial rule in Brazil.

This book showcases new research by emerging and established scholars on white workers and the white poor in Southern Africa. Rethinking White Societies in Southern Africa challenges the geographical and chronological limitations of existing scholarship by presenting case studies from Angola, Mozambique, South Africa, Zambia and Zimbabwe that track the fortunes of nonhegemonic whites during the era of white minority rule. Arguing against prevalent understandings of white society as uniformly wealthy or culturally homogeneous during this period, it demonstrates that social class remained a salient element throughout the twentieth century, how Southern Africa ' s white societies were often divided and riven with tension and how the resulting social, political and economic complexities animated white minority regimes in the region. Addressing themes such as the class-based disruption of racial norms and practices, state surveillance and interventions – and their failures – towards nonhegemonic whites, and the opportunities and limitations of physical and social mobility, the book mounts a forceful argument for the regional consideration of white societies in this historical context. Centrally, it extends the path-breaking insights emanating from scholarship on racialized class identities from North America to the African context to argue that race and class cannot be considered independently in Southern Africa. This book will be of interest to scholars and students of southern African studies, African history, and the history of race.
