Calculate: Use a calculator to multiply the index of refraction of the first medium (n_1) by the sine (\sin) of the angle of incidence (θ_i). Use this value to fill in the fifth column of the table. Next, multiply the index of refraction of the second medium

Answer Key**

Check that w is 2.0
and θ is 0° .

Introduction: When
light passes from a
vacuum into a
medium such as
glass, it slows
down. The index of
refraction (n) is

Where To Download

equal to the ratio of the speed of light in a vacuum to the speed of light in a medium. The index of refraction of air is very close to 1.00.
