~~The March of Progress, properly called The Road to Homo Sapiens, is an illustration that presents 25 million years of human evolution.It was created for the Early Man volume of the Life Nature Library, published in 1965, and drawn by the artist Rudolph Zallinger.. It has been viewed as a picture of the discredited view (orthogenesis) that evolution is progressive.~~

The Evolution of Man - Volume 2 by Ernst Haeckel is a rare manuscript, the original residing in some of the great libraries of the world. This book is a reproduction of that original, typed out and formatted to perfection, allowing new generations to enjoy the work. Publishers of the Valley's mission is to bring long out of print manuscripts back to life.

The Evolution of Man - Volume 1 by Ernst Haeckel is a rare manuscript, the original residing in some of the great libraries of the world. This book is a reproduction of that original, typed out and formatted to perfection, allowing new generations to enjoy the work. Publishers of the Valley's mission is to bring long out of print manuscripts back to life.

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

The Isle of Man is a small island off the northwest coast of England in the Irish Sea. Though heavily influenced by nearby England, Ireland, Wales, and Scotland, it possesses a distinct culture all its own that is reflected in everything from its language, Manx, to its independent parliament, the Tynwald, a legacy of Viking rule. A New History of the Isle of Man takes a fascinating, in-depth look at the island's past. The first volume of the series comprises a natural history of the island from some 500 million years ago to the present day. Beginning with the story of the first arrival of plants and animals on the island's rocky shores, it concludes with an appraisal of changes in the environment of the island wrought by its human residents.

This volume represents the proceedings of the Irving Stone Memorial Symposium on "The Origin of Humans and Humanness." Scientists in the fields of anthropology, archaeology, biology and ecology were invited to discuss their research concerning the how's, where's and why's of the evolutionary history of humans. Using our knowledge of the behavior and reproduction of living primates, chapter 1 describes what made the earliest human-like animals of 4 million years ago different from their ape relatives. While showing how the science of paleontology works, the origin of our genus, Homo, is discussed in chapter 2. With emphasis on those humans who first made regular use of stone tools some 2 million years ago, chapter 3 interprets ancient human behavior and ecology from an archeological perspective. Tools from genetics, molecular biology, archaeology and paleontology are used to examine the origin of modern Homo sapiens in chapter 4. Chapter 5 looks at the artistry of Ice Age craftsmen. Finally, using computer methods, chapter 6 delves into the complex issue of how does human behavior change, and what is the relationship between biological and cultural evolution?

Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal, tool-making, culture-inventing species distinct from other hominoids. He refutes the theory that we are sophisticated, instinctively aggressive and destructive killer apes.
