The Global Status Report on Road Safety 2018, launched by WHO in December 2018, highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians, cyclists and motorcyclists, in particular those living in developing countries. The report suggests that the price paid for mobility is too high, especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.

As governments seek to mitigate the cost of state-subsidised healthcare, branding in the pharmaceutical industry has become a critical issue. Drugs companies must change their methods of communication and distribution - focusing more on their direct relationship with the consumer. This requires fundamental changes in consumer behaviour, access to information, freedom of choice and value for money. Brands and brand values will play a leading role in this process, as has been seen with products such as Prozac and Viagra. This book by Interbrand Newell and Sorrell, the world's leading branding consultancy, provides cutting edge thinking on this area and lessons for anyone involved in brand development and management.

This book teaches medical coding for anesthesia and pain management. It will prepare the reader for passing the Certified Anesthesia and Pain Management Coder (CANPC) exam as well as improving their professional practice. The book goes beyond the concepts and applications that are required to pass the exam. It provides critical insights into actual scenarios faced by coders in the real world. 70 unique cases are presented that will highlight the correct coding method. These give the reader practice in applying principles to actual patient cases. The author's unique formula allows the reader to arrive at the best coding decision for the most complex patients. Each case is discussed from a clinical viewpoint to explain the coding rationale. This book is both an invaluable asset for anyone working towards a CANPC exam but also serves as a useful reference for those currently holding the certificate.

In the United States, homeownership is synonymous with economic security and middle-class status. It has played this role in American life for almost a century, and as a result, homeownership's centrality to Americans' economic lives has come to seem natural and inevitable. But this state of affairs did not develop spontaneously or inexorably. On the contrary, it was the product of federal government policies, established during the 1930s and developed over the course of the twentieth century. At the Boundaries of Homeownership traces how the government's role in this became submerged from public view and how several groups who were locked out of homeownership came to recognize and reveal the role of the government. Through organizing and activism, these boundary groups transformed laws and private practices governing determinations of credit-worthiness. This book describes the important policy consequences of their achievements and the implications for how we understand American statebuilding.

Every once in awhile, there is a book with a message so timeless, so universal, that it transcends generations. The Unwritten Laws of Business is such a book. Originally published over 60 years ago as The Unwritten Laws of Engineering, it has sold over 100,000 copies, despite the fact that it has never been available before to general readers. Fully revised for business readers today, here are but a few of the gems you'll find in this little-known business classic: If you take care of your present job well, the future will take care of itself. The individual who says nothing is usually credited with having nothing to say.

Whenever you are performing someone else's function, you are probably neglecting your own. Martyrdom only rarely makes heroes, and in the business world, such heroes and martyrs often find themselves unemployed.
