Win32 Perl Programming: The Standard  
Extensions Second Edition Introduction Since  
I published the first edition of Win32 Perl  
Programming: The Standard Extensions, quite a  
bit has changed. Perl has changed versions, a  
slew of new extensions have been written,  
bugs have been squashed, new bugs have been  
discovered and the cycle has continued.

## Where To Download Win32 Perl Programming The Standard Extensions

After your Perl application loads the Win32::ODBC extension, it needs to initiate a conversation with a database. This is performed by creating an ODBC connection object using the new command: `$db = new Win32::ODBC( $DSN [, $Option1, $Option2, ... ] );` The first parameter (`$DSN`) is the data source name. This parameter can be either a DSN or a DSN string.
